AMENDMENTS TO THE SPECIFICATION**In the Specification:**

Please replace the paragraph beginning on page 2, line 19 with the following amended paragraph:

The invention relates to display, notification, and interaction with prioritized documents such as email messages. In one embodiment, a method first receives a document, and assigns a measure of priority ~~document~~ to the document based on a document classifier. A user is then alerted to the document, based on a predetermined or dynamically identified criteria. For example, the user can be alerted by a sound of a specific nature and amplitude being played, by a notification summarizing the document being displayed, by the document being opened and displayed automatically, by the document window defining the borders framing the document, ~~from~~ by the document being resized or centrally located, and by the document receiving different degrees of focus on the user's display.
